

Agentic Efficiency Report (Redacted)

awesome-copilot · branch main · github import · scan SCN-2026-01-01-0002

56

Wasteful

Weighted efficiency verdict

Redaction rules applied

File contents and code samples are removed. Exact file and folder names are replaced with path aliases such as dir-01/file-007.md. Counts, scores, category findings, penalties and savings estimates are preserved exactly as in the full report.

What we found

Overall efficiency score	56 / 100
Verdict	Wasteful
Files discovered	2,357
Files parsed	1,446
Files skipped	54
Tokens analysed	3,900,897
Estimated monthly token waste	1,201,895,900
Estimated monthly credit waste	12,018.96 credits
Estimated monthly dollar waste	\$6,730.63
Savings range (low / high)	\$5,384.50 - \$8,076.76
Duplicate clusters found	5
Oversized context files	0
Overlapping agent groups	11
Review stages inferred	14
Agent-like files detected	1,500

Category scores

Category	Score	Weight	Penalty	What this means
Redundancy	42/100	25%	-58	5 groups of near-identical files and 37 repeated instruction blocks were found.
Token bloat	100/100	25%	-0	0 context or memory files are over 8,000 tokens.
Review overhead	30/100	20%	-70	14 review or approval steps were inferred from your instructions.
Agent sprawl	20/100	20%	-80	1500 agent-style files were found (229 agent roles, 1038 skills).
Architecture inefficiency	100/100	10%	-0	5 service directories against 0 hand written source files.

Top 5 waste drivers, in plain language

1. 14 separate review or approval steps were found

Your instructions describe many checks before work is accepted. Each extra check means another pass over the same material, which costs time and money.

Review overhead · 649,902,500 tokens/month · 6,499.02 credits · \$3,639.45

2. 1500 agent-style files is more than this repo needs

There are many separate agent, skill and prompt files. Each one adds instructions that have to be loaded and kept in sync. Fewer, clearer files cost less and break less often.

Agent sprawl · 430,329,600 tokens/month · 4,303.30 credits · \$2,409.85

3. 233 orchestration files create extra hand-offs

There are many files describing how work moves between agents. Every hand-off adds instructions that must be loaded and kept in step with the others.

Review overhead · 80,653,100 tokens/month · 806.53 credits · \$451.66

4. 7 files are near copies of each other

These files say almost the same thing. Every time your agents run, the same words get sent to the model more than once. Keeping one source of truth removes the repeat cost.

Redundancy · 31,202,600 tokens/month · 312.03 credits · \$174.73

5. The same instruction block is pasted into 3 files

One block of instructions has been copied into several agent files. Only one copy is needed. The rest is paid for on every run.

Redundancy · 1,973,200 tokens/month · 19.73 credits · \$11.05

Savings assumptions and formulas

- `estimated_tokens = ceil(character_count / 4)`
- Report credits: 1 credit = 100,000 tokens.
- Vendor billing: \$1.00 = 100 vendor credits; 1 vendor credit = 2,500 input tokens or 500 output tokens (output costs 5x input).
- Derived rates: \$4.00 per 1M input tokens, \$20.00 per 1M output tokens.
- Waste is assumed to be 90% input tokens and 10% output tokens.
- Each agent asset is assumed to be loaded 200 times per month.
- Aggregate savings show a +/-20% range.
- Similarity uses normalised text so whitespace-only and case-only changes are ignored.
- Files under 200 characters are excluded from duplicate detection.
- Scoring runs in two tiers. Tier 1 is the seven specified penalty rules with their hard caps. Tier 2 is severity scaling: for each category we measure the share of the monthly agent context budget that the category wastes, and deduct proportionally up to that category's tier 2 cap, with a category that wastes 50% or more of the budget taking the full deduction. Without tier 2 the capped rules alone could never produce a score below about 72, so the Wasteful and Critical bands would be unreachable. Both tiers are itemised in the score ledger.
- Monthly agent context budget for this repository = 780,179,400 tokens (3,900,897 agent asset tokens x 200 runs per month).

Setting	Value
Tokens per report credit	100,000
Vendor credits per dollar	100.0
Input tokens per vendor credit	2,500
Output tokens per vendor credit	500
\$ per 1M input tokens	\$4.00
\$ per 1M output tokens	\$20.00
Agent runs per month	200
Output token share of waste	10%
Aggregate variance	+/-20%
Rates last refreshed	never
Rates source	Product owner supplied defaults (not yet refreshed)

How the score was calculated

Penalty rule	Hits	Points each	Cap	Applied	Category
Near-duplicate agent/context file pair (similarity >= 0.80)	22	5	32	-32	redundancy
Repeated instruction block >= 150 chars in 3+ files	37	4	20	-20	redundancy
Context or memory file over 8,000 tokens	0	6	24	-0	token_bloat
Agent-like files above 12	1,488	2	20	-20	agent_sprawl
Review/approval stages above 4	10	5	15	-15	review_overhead
Microservice mismatch (>= 8 service dirs and < 120 source files)	0	12	12	-0	architecture_inefficiency
Monolith mismatch (1 service and >= 10 overlapping agent roles)	0	10	10	-0	architecture_inefficiency
Severity scaling - share of the monthly agent context budget wasted by duplication	5	0	60	-6	redundancy
Severity scaling - share of the monthly agent context budget wasted by oversized files	0	0	60	-0	token_bloat
Severity scaling - share of the monthly agent context budget wasted on review loops	94	0	55	-55	review_overhead
Severity scaling - share of the monthly agent context budget wasted on extra agents	55	0	60	-60	agent_sprawl
Severity scaling - share of the monthly agent context budget lost to the architecture	0	0	50	-0	architecture_inefficiency

Recommended actions, ranked by impact then effort

#	Action	Category	Impact	Effort	Tokens/mo saved	\$/mo saved
1	Move the shared block into one file and reference it from the others.	Redundancy	High	Small	1,404,000	\$7.86
2	Keep at most four review gates. Combine the overlapping ones into a single checklist.	Review overhead	High	Medium	649,902,500	\$3,639.45
3	Keep the most complete file, delete or shrink the copies, and link to the kept file instead.	Redundancy	High	Medium	31,202,600	\$174.73
4	Group agents by job. Merge the ones that overlap and delete the ones nobody calls.	Agent sprawl	High	Large	430,329,600	\$2,409.85
5	Keep one skill file per capability and delete the near copies.	Agent sprawl	Medium	Small	1,402,900	\$7.86
6	Describe the flow once in a single orchestrator file and let the agents stay simple.	Review overhead	Medium	Medium	80,653,100	\$451.66

File inventory by category

Group	Files	Parsed	Skipped	Tokens
